

Sabre Tactical will continue on with Paul Castle's vision of providing Law Enforcement, Military, Security Professionals and Select Civilians with the most innovative and cost effective firearms training available, The CAR System.

Sabre Tactical offers the CAR eLearning Course available for immediate download but does not offer CAR live-fire training. In order to promote access to the highest quality CAR live-fire Classes we established the Sabre Tactical Associate Program.

Originally Developed by Paul Castle

THE CAR SYSTEM

The CAR System

The Bladed Stance offers greater stability and maneuverability

Operators present less of a Target

The CAR System

Four easily transitioned
Positions

High

Combat High

Extended

Apogee

Works in harmony with the
body

Easier to develop instinctive
reaction skills

The CAR System

Unmatched weapon retention

The CAR System

Allows the Operator to engage and disengage very quickly

The CAR System

Increased field of vision as both eyes remain open

The CAR System

Utilizes either hand with very fast transition capability (Right hand - left eye or left hand - right eye)

Excellent Platform for Left Handed Shooters

Tremendous reduction in felt weapon recoil

Hit rates are drastically increased

The CAR System

Offers weapon loading,
re-loading and crisis
malfunction procedures

The CAR System

Adapted to multiple scenarios

The CAR System

Works extremely well in confined spaces

Offers some of the most efficient forms of Room Entry and Close Quarter Battle (CQB) techniques

The CAR System

Allows for a free hand when required

The CAR System

Works very well with
night vision equipment

The CAR System

The Pistol Punch allows for a non-firing weapon to still be effective

Offers a less-lethal option

The CAR System

Includes a program for firearms usage when the Operator has been wounded

(Single Handed Operating Tactics)

The CAR System

One System for multiple
weapon categories

Handguns

Long weapons

Less-lethal

The CAR System Summary

More effective performance of personnel in actual conflicts, leading not only to reduced casualties among officers / military personnel but among noncombatants and possibly suspects / opposing forces as well. This stems from a more effective use of firearms and other weapons, leading to quicker cessation of conflicts and thus less opportunity for injuries to occur, as well as greater combat effectiveness itself. The results are increased safety of the officers / military personnel *and* of noncombatants, reducing social costs and financial liability while more effectively neutralizing violent criminals and/or enemy combatants.

The CAR System Summary

Higher success rates of nontraditional personnel, e.g., smaller-statured men and women, due to unique features of the CAR system which reduce dependence on muscular endurance, strength, and physical size. This offers a greater diversity of the force in question (e.g. ethnic and gender representation), better reflecting society at large.

Training efficiency, due to the use of identical training principles for handguns, carbines, shotguns, "less-lethal" alternative weapons, and empty-hand techniques provides for reduced costs of training and recruitment.
